

## AVH-P5050DVD

**AVH-P5050DVD Single Din in-dash DVD player RRP \$1399**

**FEATURES:** Audio/Visual unit with 7" screen, direct iPod® (audio and video) and USB

### iPod® Direct Connection

Keep file search and access quick and easy. Pioneer AV head units let you connect an iPod® and directly control audio and video menus, functions and selections via head unit's iPod®-style touch-panel display. USB digital data transfer makes for excellent sound quality heard through a Pioneer system.

### AUX-In Mini Jack Connection for Audio and Video

Pioneer's AV head units' AUX-in mini jacks extend playback from external iPod® Audio, iPod® Video, MP4 player, digital camera and other portable digital audio/video playback devices. These jacks are built into the front panel for fast, trouble-free connection.

### Direct Touch Panel Operation

Touch the 7-inch\* wide color LCD to command audio and video. User-friendly GUI (Graphic UserInterface) makes file access and playback easy from DVD, CD, iPod® or other digital devices. AG (Anti-Glare) screen coating prevents external light diffusion to ensure clear, bright views of images reproduced from DVDs.

### DivX® Playback

DivX® is the world's most popular high-compression digital video format and does not appreciably compromise movie picture quality. Simply burn a movie from a PC onto a long-playing Video CD or DVD, then play that disc in a Pioneer AV head unit to gain a new appreciation of in-car theater.

MP3/WMA/AAC Playback on DVD MP3 playback of MP3/WMA music files burned on DVD opens up an intriguing possibility: capacity to store your entire album collection on just one or two discs, without external connections! The capacity of a 4.7 GB DVD disc to store up to around 100 hours of audio (equivalent to approximately 1 000 songs, or 100 full pre-recorded CDs), after all, far surpasses that of a typical CD.

### Selectable On-Screen

Display Colour Select among five screen colours, according to your preference and colour scheme.
