Description

Fine tune the look of the CQ-C7405W to suit your car with the 7 colour display panel. Let the unit automatically scroll through the colours or adjust the colours to pick your own personal favourite. You can also choose from a selection of still pictures and short moving clips, or you can download your own pictures. The large 3DDM screen makes controlling your iPod from the rotary iPod control (cable sold separately CA-DC300N) a breeze, allowing quick and easy control of your iPod via the head unit and it will also charge your iPod while you drive. Not only does it look good it also sounds superb, with such features as an MP3 remaster function, which adds back many of the sounds that are lost when you compress your files into MP3 format, plus SRS WOW raises the listening environment towards your ears and fine tunes the radio via the SQ7 7-band Sound Quality adjuster. The CQ-C7405W can also be connected to Panasonic's own Bluetooth car kit (sold separately CY-BT100N) for hands free connection with your cell phone.
