

DD-3512e-2 12" DVC Subwoofer

The 3500 "e" Series subwoofers have been redesigned to utilize more features and manufacturing techniques from the 9500 series. The "3" series changes include new cast baskets with more cooling and more excursion, larger magnets (the magnet weight jumps to 200 ounces), longer coil windings and increased internal motor cooling. The 3500e also uses our American made, Synthetic Spider Suspension, our Synthetic Fiber Blend (SFB) cone stock, and EROM surrounds. The lead wires are Direct Connection termination with 10 gauge battery cable hook-up wire. These features combine to make the 3500e Series drives capable of over 3.0 inches of useable, continuous excursion. The 3500e Series are all about extracting every last bit of efficiency from a system design. In keeping with stringent DD standards, the 35s have low moving mass, use a well controlled suspension and are powered by our own precision machined motor assemblies. These features make the 3500e Series driver a perfect choice for a wide variety of system designs. The 3500 Series woofers have been part of award winning SQ systems, brutal ground-pounders, record setting SPL cars and countless enthusiast systems around the world. The DD way isn't the most cost effective way to build speakers, in fact its about 180 degrees off, but produces the best speakers possible.

Features:

- » CNC machined motor structure
- » 200 oz double stacked strontium ferrite magnet
- » 3 inch DVC voice coil with 1200 watts continuous power handling
- » Free Flow Cooling System
- » Multi-layer synthetic spider suspension
- » RMS/Peak 1200/4800
- » Sensitivity 89dB
- » Weight 15.88Kg

RRP \$1299.00
