Monoblock M Class Amplifier

The M Class Amps are monoblock amplifiers engineered for low frequency applications. The M-Class amps are made to be the soul of your audio system, bass pumping machines so powerful that your face could be ripped from your head in a momentary lapse of reason. Well, maybe that's a bit of a stretch, but these amps offer strong power, logical controls and efficient design. The M-Class amps accept high level signals through their RCA connections, saving the cost of outboard high-low level converters. Clipping indicator circuits are included to aid in proper setup of gains relative to volume levels. Terminal block connectors are used for power and speaker terminations. Anyway, the guts of the M-Class is old school in thought; use good parts, use higher capacity parts than are needed, use strong power supply, a clean preamp/xover section and good quality control. All amps go through their own burn-in time and full bench testing. Digital Designs takes amp building seriously. We needed really good amps to put in our cars and we are lucky enough to be able to design our own. Talk about cool!

Features:

- » Two Amp Linkable
- » High level inputs can be feed into RCA's
- » Terminal block power & speaker connections
- » Clipping indicator
- » Speaker short protection
- » Reverse polarity protection
- » Thermal protection
- » Low & high voltage protection
- » Cont Power @ 4 Ohm 300w x 1, @ 1 Ohm 1200w x 1

RRP \$1299.00
