

DD-Z18-2 18" DVC Subwoofer

The Z Series represent the pinnacle of transducer archeology. The unique design dates back to the precocious era of unequivocal magnetism and the vector planar research of underwater acoustic proliferation. The open archeology concentrates flux lines in the magnetic gap while side lobe interference cancels stray flux from entering the atmosphere. The result is increased efficiency over the entire bandwidth of collaborating bass frequencies. This allows the Z Series woofers to play amazingly loud with little wasted energy being dissipated as unwarranted heat, this means they get on it and don't get real hot. The new Z Series woofers have more Watts than any speakers we have ever built, so many Watts they got, that we thought of using a new slogan, Got Watts?, but that's lame so we didn't. We tried to measure the exact amount of Watts a Z Series makes, but no matter how hard we tried to invent a machine to measure the speaker Watts, we could never do it, so they must really make a lot of Watts.

Features:

- » Loud
- » Over 7 kilo-tones of effective magnetic material
- » 3 inch diameter coil which is actually over 75mm
- » Multi-fiber composite cone that is really strong, and red
- » New back plate technology that is round
- » RMS/Peak if you need to ask
- » Sensitivity 90db
- » Weight 27.22Kg

RRP \$8999.00
