

M15 / M25

Transponder

Automatic Immobiliser Systems

Transponder immobilisers are the most secure immobiliser system on the market as they use a discrete transponder tag to deactivate the immobiliser.

These models are certified to AS/NZS4601 2003, has an NZSA 3 Star rating, and can be installed as a stand alone security immobiliser system or used to enhance an existing alarm system.

The **M15** uses a Touch-Key transponder tag - just touch the tag against the dashboard mounted receiver to allow your engine to start.

The **M25** uses a proximity transponder tag.

An antenna is placed around the ignition barrel and when the transponder tag is placed in close proximity, the immobiliser deactivates. The antenna can be hidden in other places to enhance security even further.
