

M80i-09

Remote Controlled Automatic Triple Immobiliser System

The **M80i** automatic triple circuit engine immobiliser is designed to deter theft by automatically preventing the starting and running of your vehicle. If your vehicle has central locking (may require additional parts and cost depending on vehicle type), the **M80i** can provide keyless entry - just press the remote button and your doors lock or unlock!

The **M80i** will automatically immobilise your engine 30 seconds after turning the ignition off so you know your vehicle is always secure

Is your vehicle turbo charged and has a turbo timer ? No problem, the **M80i** has special software built-in that allows the system to be armed with the engine running with no sacrifice in security. If it is broken into whilst the engine is running, the engine will stop and be immobilised immediately. The **M80i** can easily be upgraded to one of the alarm versions, and qualify for the higher Star rating, by adding the siren and sensor(s) of your choice.

Fully Tested and Certified to the AS/NZ 4601 amendment 1 2003 for vehicle immobilisers.

Main Features
