

# MCA500

## Motorcycle Remote Controlled Immobiliser & Alarm System

The Mongoose **MCA500** is a compact simple to use yet well featured motorcycle / scooter / quad bike alarm system

Protection against theft is by an engine immobiliser, a remote adjustable 8 level shock sensor, a seat pin switch and ignition ON trigger. Any heavy impact or shock to the motorcycle, such as taking it off the centre stand, will trigger the alarm.

The **MCA500** is more than just a security system as it offers convenience features that make the use of your motorcycle more enjoyable..

An optional extra cost feature is the remote engine starter - just the press of a button on the remote and your engine warms up automatically - assuming of course your bike has electric start - and if you don't ride it within 5 minutes, the engine stops automatically.

Fit a Mongoose **MCA500** and get real security and more pleasure out of your motorcycling.

### *Options:*

- Mercury tilt switch (shown in photograph) for bikes with only a side stand - lift the bike off the stand and the alarm sounds.
- FM pager - if your alarm is activated, you get paged, direct from the bike to you!
- MTP-3 GSM mobile phone text pager - get warning text messages on your mobile phone if your alarm sounds or your bike battery is low.
- VT201 GPS Tracker - if it does disappear for some reason, you can locate it !

### *Main Features*

- 2 waterproof 4 button remotes
- Small compact waterproof alarm module
- Separate super loud siren
- Built-in shock sensor - adjusted by remote
- Built-in engine immobilisation
- Light flash - confirmation and during alarm condition
