

AVS S3 Immobiliser

Immobiliser features

Three automatic immobilisers

Fuel pump, ignition system and starter motor immobiliser cuts (where possible) are made so the car cannot be started unless it is disarmed via the remote. The system will immobilise 38 seconds after the ignition is turned off or when the alarm is armed.

Central door locking from the remote*

The doors will lock/unlock when the alarm is armed/disarmed.

Turbo timer functions

The alarm is armed as usual & the car will continue to run for the preset run time. If the alarm is triggered during this time the car will shut down & the alarm will sound.

Turbo timer - no need to fit an external turbo timer for turbo cars - with this feature the car engine will run for 1, 2.5 or 5 minutes after arming. The most secure way to have a turbo timer. The turbo timer can be turned off prior to the run time via the remote.

Turbo timer interface - link the alarm up with an external turbo timer.

Hyper blue status LED

2 x **Waterproof** four button rolling code remotes (4 billion combinations)

PIN code override/emergency disarm via the ignition

Three year warranty

Programmable features

- Automatic re-arm/re-lock*
- Electronic boot release via the remote*
- Door lock on ignition*
- Perimeter night light from indicators on disarm
- Interior light illumination
- Timed headlight delay*
- Second vehicle control via a single remote

* Some cars require additional parts

Compatible with the AVS OEM Enhancement module so the alarm can be controlled via a car's factory remote.

Compatible with the AVS RXPRO for adding wireless sensors.

PLUS easy to upgrade to the
AVS S5 Five Star alarm/immobiliser or
AVS S4 Four Star alarm/immobiliser

Standards certification:
AS/NZS 4601.1999 Rev A
Certificate No. 717
Test report: XF2070/R1

THE RIGHT ALARM FOR YOUR TURBO

Protect your engine and your car

All AVS Star Rated car alarms are designed specifically to work with turbo cars.

The AVS S-Series (S5, S4 or S3) and the AVS A4 allow you to arm the alarm while your car is still running. There are two options:

BUILT - IN TURBO TIMER

- < Use the turbo timer built-in to the alarm
- < Will allow the car to run for 1, 2.5 or 5 minutes after the alarm is armed
- < If the alarm is triggered the engine stops and immobilises and the alarm sounds
- < Can be shut down before the end of the run from your AVS remote

INTERFACE WITH YOUR TURBO TIMER

- < If your car already has a turbo timer the alarm can be interfaced with it so you can arm the alarm with the car still running
- < If the alarm is triggered the engine stops and immobilises and the alarm sounds
