

Why you will want the AVS S3 immobiliser ...

The AVS S3 provides three immobilisers and can be upgraded to a full alarm system.

- ✓ **Three normally open automatic immobilisers**
- ✓ **On board MAP function** for control via the car's factory remote
Allows the system to be controlled via the car's factory remote. Boot pop will also work from the factory key (and disarm the immobilisers at the same time). It gives your customer the convenience of using their factory key while getting all the additional AVS features and customisations that separate MAP alarms can't deliver.
- ✓ **On board turbo timer options**
Turbo timer – allows the car to run for 1, 2 or 4 minutes after the system is armed. It can be shut down prior to the end of the run time with the AVS remote.
Turbo timer interface – allows the system to be armed while the car is running on an external turbo timer.
- ✓ **2 x waterproof remotes**
With the added functionality of being compatible with the AVS RXPRO receiver so the customer can control other devices (such as their garage door) with the AVS remote. Plus you can add extra control channels to the remote so that the  button works as normal for arming/disarming, and the remaining buttons control three extra channels that can be programmed to give pulsed, latching or timed outputs via the RXPRO receiver.
- ✓ **Central locking** from the remote*
- ✓ The original **hyper blue LED** status light
- ✓ Factory set 5-digit random **PIN code** for emergency disarm with 100,000 possible code combinations.
- ✓  **Three year warranty**
- ✓ Easy to upgrade to either the Five Star AVS S5 or Four Star AVS S4 alarm systems

Plus the AVS S3 has a full range of customisable programmable features:

- ✓ **On board courier function**
This function allows the vehicle to run indefinitely while the system is armed and the ignition is on.
- ✓ Automatic re-arm/re-lock*
- ✓ Door lock on ignition*
- ✓ Perimeter night light from indicators on disarm
- ✓ Interior light illumination
- ✓ Timed headlight delay*
- ✓ Second vehicle control via a single remote
- ✓ Full remote functionality including boot release*

**Some cars require additional parts*
