

AVS S5 alarm/Immobiliser

Alarm features

Three automatic immobilisers

Fuel pump, ignition system and starter motor immobiliser cuts (where possible) are made so the car cannot be started unless it is disarmed via the remote. The system will immobilise 38 seconds after the ignition is turned off or when the alarm is armed.

Intelligent glass break sensor

Detects the sound frequency of breaking glass. It will only trigger the alarm if the shock sensor also picks up an impact. This reduces false alarms.

Intelligent two-stage adjustable shock sensor

It can distinguish between environmental shocks such as trucks or aircraft & a thief attempting to break in. It will auto adjust its sensitivity for the environment on arming. It gives a warning on a light impact & a full alarm on a heavy impact to the vehicle.

Central door locking from the remote*

The doors will lock/unlock when the alarm is armed/disarmed.

Dual tone **data** battery back-up siren

It cannot be fooled into turning off like normal battery back-up sirens.

Turbo timer functions

The alarm has a built in turbo timer or it can run in conjunction with an external turbo timer. The alarm is armed as usual & the car will continue to run for the preset run time. If the alarm is triggered during this time the car will shut down & the alarm will sound.

Turbo timer - no need to fit an external turbo timer for turbo cars - with this feature the car engine will run for 1, 2.5 or 5 minutes after arming. The most secure way to have a turbo timer. The turbo timer can be turned off prior to the run time via the remote.

Turbo timer interface - link the alarm up with an external turbo timer.

Door, bonnet & boot protection

If the alarm is armed & a door, bonnet or boot is opened the alarm will sound.

Hyper blue status LED

2 x **Waterproof** four button rolling code remotes (4 billion combinations)

PIN code override/emergency disarm via the ignition

Three year warranty

Programmable features

- ➊ Silent arm/disarm by remote or programmable
- ➋ Door, bonnet or boot ajar warning
- ➌ Automatic re-arm/re-lock*
- ➍ Electronic boot release via the remote*
- ➎ Door lock on ignition*
- ➏ Perimeter night light from indicators on disarm
- ➐ Interior light illumination
- ➑ Timed headlight delay*
- ➒ Remote panic/car finder function
- ➓ Second vehicle control via a single remote

Compatible with the AVS OEM Enhancement module so the alarm can be controlled via a car's factory remote.

Compatible with the AVS RXPRO for adding wireless sensors.

Standards certification:
AS/NZS 3749.1.2003 Class A
Certificate No. 722
Test report: XF2106/R2

* Some cars require additional parts
