▶ AVS S5 ALARM

FROM THE AVS S-SERIES RANGE

Why you will want the AVS S5 alarm ...

A Five Star alarm engineered to the highest specifications, the AVS S5 is the ultimate in car security.

- ✓ **Three** normally open **automatic immobilisers**
- ✓ On board **intelligent glass break sensor**

The sensor will only trigger if the shock sensor also picks up an impact. This reduces false alarms.

- ✓ On board **intelligent two-stage adjustable shock sensor**
The sensor can distinguish between environmental shocks such as trucks or aircraft and a thief attempting to break in. It will auto adjust its sensitivity for the environment on arming. (It can also be adjusted via remote programming.)
- ✓ Dual tone **data battery back-up siren**
It cannot be fooled into turning off like a normal battery back-up siren because it has a data line that communicates independently with the alarm brain.
- ✓ On board **MAP function** for control via the car's factory remote
Allows the alarm to be controlled via the car's factory remote. Boot pop will also work from the factory key (and disarm the alarm at the same time). It gives your customer the convenience of using their factory key while getting all the additional AVS alarm features and customisations that separate MAP alarms can't deliver.
- ✓ On board **turbo timer** options
Turbo timer – allows the car to run for 1, 2 or 4 minutes after the alarm is armed. If the alarm is triggered the car will shut down and the siren will sound. It can be shut down prior to the end of the run time with the AVS remote.
Turbo timer interface – allows the alarm to be armed while the car is running on an external turbo timer. If the alarm is triggered the car will shut down and the siren will sound.
- ✓ **2 x waterproof remotes**
With the added functionality of being compatible with the AVS RXPRO receiver so the customer can control other devices (such as their garage door) with the AVS remote. Plus you can add extra control channels to the remote so that the  button works as normal for arming/disarming, and the remaining buttons control three extra channels that can be programmed to give pulsed, latching or timed outputs via the RXPRO receiver.
- ✓ The original **hyper blue LED** status light
- ✓ Factory set 5-digit random **PIN code** for emergency disarm with 100,000 possible code combinations.
- ✓ A full range of AVS standard features provided with your alarm
Central locking from the remote*, door/bonnet/boot ajar warning, alarm activation warning, past alarm trigger memory (last 10 activations), remote panic, boot release from the remote*, silent arming/disarming from the remote (or prog).

- ✓ Three year warranty

Plus the AVS S5 has a full range of customisable programmable features:

- ✓ On board **courier function** - allows the vehicle to run indefinitely while the alarm is armed and the ignition is on. If the alarm is triggered the car will shut down and the siren will sound.
- ✓ Automatic re-arm/re-lock*
- ✓ Door lock on ignition*
- ✓ Perimeter night light from indicators on disarm
- ✓ Interior light illumination
- ✓ Timed headlight delay*
- ✓ Second vehicle control via a single remote
- ✓ Past alarm trigger memory of the last 10 activations

Features subject to change. *Some cars require additional parts
