

Pioneer DEH-2150UB Car CD Tuner with front USB direct connection

FEATURES:

MP3, WMA or WAV music file playback from CD and USB
front Auxiliary input
Detachable face

Advanced Sound Retriever

Hear the glory of original sound across a deeper, wider spectrum from highly compressed MP3 and WMA files stored on a USB memory device. By compensating for data (especially higher frequencies) that tend to get lost in the digital compression process, Pioneer's Advanced Sound Retriever technology enhances audio reproduction nearly all the way up to 20kHz frequencies.

Front USB Connection

Take your favourite MP3 and WMA files for a ride. The DEH-P2150UB has a front USB terminal to directly connect a portable digital player, USB memory device or other USB-compatible gear, so you can play in your car whatever you have recorded via PC. It's fast and easy. No adapters required.

Built in 50W x 4 Channel High-Power MOSFET Amplifier

To minimize voltage loss in its head unit amplifiers, Pioneer built-in high-performance Power MOSFET integrated circuitry into all its head units. The MOSFET amplifier processes signals more efficiently at 50W x 4 maximum total output. This reduces distortion to virtually nothing at high frequency ranges giving you great clear sound.

Front Aux-In Connection

Hook up your portable digital devices with ease in an instant. Each new Pioneer head unit has a built-in AUX input on the front panel so you can connect your iPod, MP3 player and other portable music devices.

EEQ – Easy Equalizer

You can adjust the sound according to the music you listen to. Switch between five preset equalization curves (Super, Bass, Powerful, Natural, Vocal, Flat) simply by pushing an EQ button. You can also boost the volume. Select among three levels of loudness (high/mid/low).

Detachable Face Security

All our entry-level head units have a detachable face that you can hide away or take with you when you park.

Wireless Remote control

Hand over control of the music to those in the back seat.
